InaParc Ltd – Stand B40 Elevation Upgrade Kits

Using the latest technology from Hectronic GmbH combined with the manufacturing experience of the engineering team at InaParc Ltd, the Elevation Upgrade Kits were born.

After a number of our customers approached us looking for a cost effective pay and display solution positioned between reconditioned and brand new, our engineers set to work! After extensive research and testing, the kits were developed to fit a number of machine types and when combined with Hectronic's world leading technology they can lift even the oldest machines into the modern era.

The Elevation Upgrade Kits can be combined with the latest technology to enhance previously stand-alone coin-only machines so as to enable card, contactless and note payment options. Not to mention opening up the opportunity to link these Elevation Kits with back office monitoring and ANPR solutions all with free tariff and coin upgrades as standard.

Always dedicated to the highest levels of personal service, we believe our Elevation Upgrade Kits offer a cost effective platform to anyone looking for a future proof solution.
